

1. Microsoft Entra Roles

What is it?

Used to manage privileged access for Microsoft Entra administrative roles.

Examples:

Global Administrator
User Administrator
Authentication Administrator
Security Administrator
Helpdesk Administrator

Real World Example

John is a User Administrator.

Without PIM:

John
↓
User Administrator
↓
24x7 Access

Risk:

Account Compromised
↓
Attacker Gets Admin Access

With PIM

John

↓

Eligible User Administrator

↓

Requests Activation

↓

MFA

↓

Approval

↓

2 Hours Access

↓

Role Removed

Why Organizations Use It

Benefits:

- Just-In-Time Access
- Approval Workflow
- MFA Enforcement
- Reduced Attack Surface

SC-300 Use Cases

Configure PIM for:

Global Administrator

Security Administrator

User Administrator

Authentication Administrator

2. Groups

What is it?

Used to manage privileged access to Groups.

Not Roles.

Groups.

Example

You have:

Finance Team Group

Members can access:

- Payroll System
- Finance SharePoint
- Finance Reports

Without PIM

Sarah

Permanent Owner

Risk:

Can add/remove members anytime

With PIM for Groups

Sarah

Eligible Group Owner

Requests Activation

Approval

Temporary Ownership

Why It Exists

Many organizations grant permissions through groups.

Example:

Finance-App-Admins
SAP-Admins
HR-Managers

Instead of making someone permanent owner/member, PIM can control access.

Two Common Assignments

Group Owner

Can:

Add Members
Remove Members
Manage Group

Group Member

Can:

Access Resources
Use Applications
View Data

Real Interview Example

Question:

How would you provide temporary access to a Finance application?

Answer:

Create Security Group
Assign App to Group
Enable PIM for Group
Make User Eligible Member
Require Approval

3. Azure Resources

What is it?

Used to manage privileged access for Azure resources.

Examples:

Subscriptions
Resource Groups
Virtual Machines
Storage Accounts
Key Vaults

Real Example

You have:

Production Subscription

Roles:

Owner
Contributor
Reader

Without PIM

John
↓
Owner
↓
Permanent Access

Risk:

Can delete production resources anytime

With PIM

John
↓
Eligible Owner
↓
Requests Access
↓
Approval
↓
MFA
↓
4 Hours Access
↓
Access Removed

Common Azure Roles Protected by PIM

Owner
Contributor
User Access Administrator
Virtual Machine Contributor
Key Vault Administrator

Easy Way To Remember

Microsoft Entra Roles

Who can manage identities?

Examples:

Global Administrator
User Administrator

Groups

Who can manage group membership?

Examples:

Finance Group
HR Group
IT Admin Group

Azure Resources

Who can manage Azure infrastructure?

Examples:

Subscription
Virtual Machine
Storage Account
Key Vault

SC-300 Portfolio Recommendation

For your SC300-Lab07-Privileged-Identity-Management repository, create all three sections:

Part 1

PIM for Microsoft Entra Roles

Configure:

Global Administrator
User Administrator
Authentication Administrator

Part 2

PIM for Groups

Configure:

Finance Group
HR Group

Make users:

Eligible Member
Eligible Owner

Part 3

PIM for Azure Resources

Configure:

Contributor
Owner

on a test Resource Group or Subscription...
